

Generation 2 Telephone Activated Siren Controller

Your Siren is just waiting for you to call.....

Auto-Test Functions

Ready for the Future

- **Programmability:** No proprietary components or software are used in the operation of this unit. All timing functions can be programmed on site.
- **Compatibility:** This controller will integrate seamlessly with most existing siren systems.
- **Flexibility:** A telephone line is all that is required to activate your siren. Activate from anywhere, anytime. The G2 is also available with push-buttons on the front for manual activation - ask for details.

The Newest siren controller offering from Sentry Siren is simply named the G2. A variation of the G3, our flagship siren controller, the G2 provides users with the simplicity of landline telephone based activation. Simply call the siren's specific telephone number, enter your security code, then tell the siren what you'd like it to do. Easy.

A true downside of traditional, wireless siren controllers is the requirement for complex network of codes, radio frequencies, timing, reception tests, etc. Our goal was to provide a simpler option. One that didn't require antennas, dedicated frequencies, or consoles to

encode signals. The result was the Generation 2 siren controller.

Ease of use was pinnacle when designing the timing functions of the G2. If the user doesn't like the current on/off time the siren performs, a few simple button pushes will allow infinite adjustment. There is just no need to pay for a technician to make such simple adjustments. The G2 comes completely programmed from the factory, so when the user installs the controller, it's ready to go. Ask your salesperson for details.

Simple, Easy, Effective, Every Time...
